

CYBER SAFE

Security Exchange

A core member of the Chelsea Group Security & Crisis Management Division, Security Exchange is dedicated to the provision of specialist consultancy on a worldwide basis, supporting corporate, private client, affinity and insurance markets through effective contingency planning, the provision of security information, crisis management and 24/7 response.

To meet the needs of companies and individuals concerned about the risks of cyber-crime and its impact on their businesses and livelihoods, Security Exchange has developed 'Cyber Safe' to provide our clients with a comprehensive cyber risk management service.

About Cyber-Crime

Cyber-crime is not a new phenomenon; but it is a rapidly growing trend. As our reliance on the internet grows, so does the complexity of our systems; and the potential for security breaches. Moreover, criminals are finding this type of crime easier to plan and execute than the more traditional forms of crime such as armed robbery or drugs trafficking where there is a greater degree of physical involvement and therefore exposure.

Cyber-criminals come in many shapes and sizes: the computer geek intent on wreaking havoc with a big corporation's IT systems; the cyber extortionist targeting wealthy individuals or the

organized crime syndicate stealing data to sell on the highest bidder, whether another crime syndicate or a participant in a hostile acquisition.

The SE Approach

Although many are unfamiliar with the technological aspects of the threat, cyber-crime is, in effect, 'just' another potential critical security risk; to be treated in more or less the same way as other high impact events. Companies and individuals need to be aware of their risk exposure and have effective preventive measures in place; crisis management teams need to be ready to respond; the potential impact rapidly assessed; remedial action swiftly implemented; and business continuity and recovery achieved.

Operations

With our global network of cyber-crime experts, supported by a highly experienced crisis management and business continuity team, Security Exchange offers our clients not only vulnerability assessments but also specialist help with the management of cyber-crisis; and a 24/7 response service to support our clients in the event of an incident.

Cyber-Crime Vulnerability Assessments

Security Exchange has extensive experience in this potentially complex field; and our global panel of experts are on hand to review IT security and identify potential areas of vulnerability, based on their knowledge of current trends and their practical experience of dealing with real cases.

Crisis Management Team Support

In the event of a cyber-incident, Security Exchange consultants will assist in its containment and management, including crisis communications where the media might be involved; and establish, where appropriate, an effective interaction with the relevant government and law enforcement agencies.

Cyber-Crime Prevention

In structuring effective preventive measures, it should be remembered that cyber-crime usually has a substantial human element to it, if it is going to succeed. Prevention is therefore based on a broad approach, ensuring that not only are the computer-based systems protected, but also that those responsible for operating those systems are aware of the need to adhere to procedures and access protocols.

Business Continuity & Recovery

In the aftermath of any cyber-incident, the implementation of business continuity procedures to keep the business up and running is key; and Security Exchange can help not only in the preparation and prevention stage; but also in the post-incident phases, where companies often need clear, objective help in order to recover from an incident.
